Something to consider

"Brownian motion"

Einstein 1905

Perrin 1908 (1926 Nobel)

The existence of atoms was established long before technology could identify individual atoms.

What sort of arguments might this have involved?

[Could similar arguments apply to string theory?]

Today

Big picture

John J. Hopfield

Geoffrey E. Hinton

"for foundational discoveries and inventions
that enable machine learning
with artificial neural networks"

THE ROYAL SWEDISH ACADEMY OF SCIENCES

Probability Foundations

Law of large numbers & central limit theorems
→ emergence of smooth large-scale behaviour

Definitions:

Random experiments \mathcal{E} observes world

→ state ω (omega)

$\Omega = \{ \omega \}$ is set of all states for \mathcal{E}
